National Level Skill Development Workshop on Python Programming

Python is a high-level, general-purpose programming language. Its design philosophy emphasizes code readability with the use of significant indentation. Python has become one of the most popular programming languages in the world in recent years. It's used in everything from machine learning to building websites and software testing. It can be used by developers and non-developers alike.

Python is dynamically-typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly procedural), object-oriented and functional programming. It is often described as a "batteries included" language due to its comprehensive standard library. In the revised syllabi of M.Sc. Mathematics, to meet the present industrial requirements, Mangalore University has introduced Mathematics Practical using Python Programming Language.

For the effective implementation of the syllabi, teachers are well trained about the Python Programming language and its applications. The teachers and research scholars of Mangalore University campus, affiliated colleges and Engineering college faculties are participated in the workshop and got benefitted. The participants have given good feedback and are all interested to participate in future events.
