America

To Promote the Progress

of Science and Useful Arts

The Director

of the United States Patent and Trademark Office has received an application for a patent for a new and useful invention. The title and description of the invention are enclosed. The requirements of law have been complied with, and it has been determined that a patent on the invention shall be granted under the law.

Therefore, this United States

Patent

grants to the person(s) having title to this patent the right to exclude others from making, using, offering for sale, or selling the invention throughout the United States of America or importing the invention into the United States of America, and if the invention is a process, of the right to exclude others from using, offering for sale or selling throughout the United States of America, products made by that process, for the term set forth in 35 U.S.C. 154(a)(2) or (c)(1), subject to the payment of maintenance fees as provided by 35 U.S.C. 41(b). See the Maintenance Fee Notice on the inside of the cover.

Katherine Kelly Vidal

DIRECTOR OF THE UNITED STATES PATENT AND TRADEMARK OFFICE

Maintenance Fee Notice

If the application for this patent was filed on or after December 12, 1980, maintenance fees are due three years and six months, seven years and six months, and eleven years and six months after the date of this grant, or within a grace period of six months thereafter upon payment of a surcharge as provided by law. The amount, number and timing of the maintenance fees required may be changed by law or regulation. Unless payment of the applicable maintenance fee is received in the United States Patent and Trademark Office on or before the date the fee is due or within a grace period of six months thereafter, the patent will expire as of the end of such grace period.

Patent Term Notice

If the application for this patent was filed on or after June 8, 1995, the term of this patent begins on the date on which this patent issues and ends twenty years from the filing date of the application or, if the application contains a specific reference to an earlier filed application or applications under 35 U.S.C. 120, 121, 365(c), or 386(c), twenty years from the filing date of the earliest such application (“the twenty-year term”), subject to the payment of maintenance fees as provided by 35 U.S.C. 41(b), and any extension as provided by 35 U.S.C. 154(b) or 156 or any disclaimer under 35 U.S.C. 253.

If this application was filed prior to June 8, 1995, the term of this patent begins on the date on which this patent issues and ends on the later of seventeen years from the date of the grant of this patent or the twenty-year term set forth above for patents resulting from applications filed on or after June 8, 1995, subject to the payment of maintenance fees as provided by 35 U.S.C. 41(b) and any extension as provided by 35 U.S.C. 156 or any disclaimer under 35 U.S.C. 253.

(57) **ABSTRACT**

Compounds for treating cancer and, particularly, to compounds that are 5-(3-substituted phenyl)-pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione analogues and their use as anticancer agents. The compounds have the structure:

wherein: R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy; R₂ is selected from the group consisting of hydrogen, a C₁-C₆ straight or branched chain alkoxy, and benzyloxy; R₃ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl; and R₄ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl.

**5-(3-SUBSTITUTED
PHENYL)-PYRIMIDO[4,5-d]PYRIMIDINE-
2,4,7(1H,3H,8H)-TRIONE DERIVATIVES AS
ANTICANCER AGENTS**

BACKGROUND

1. Field

The present disclosure relates to compounds having anti-cancer properties and, particularly, to anticancer compounds that are 5-(3-substituted phenyl)-pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione analogues.

2. Description of the Related Art

The development of a compound having a novel chemical structure different from that of known treatments and fully satisfiable as a drug for cancer treatment as well as a pharmaceutical composition containing the compound as an active ingredient has been desired. The requirements of antitumor therapeutics call for constant development of new anticancer agents with the aim of generating medicaments that are more potent and well tolerated.

Dihydropyrimidine represents a privileged scaffold for the development of bioactive compounds. Several synthetic dihydropyrimidines have been reported to possess a broad spectrum of pharmacological activities, such as polymorphism and larvicidal (Bairagi K. M., Venugopala K. N., Mondal P. K., Gleiser R. M., Chopra D., Garcia D., et al. Larvicidal study of tetrahydropyrimidine scaffolds against *Anopheles arabiensis* and structural insight by single crystal X-ray studies. Chem Biol Drug Des. 2018; 92:1924-1932, Venugopala K. N., Nayak S. K., Gleiser R. M., Sanchez-Borzone M. E., Garcia D. A., Odhav B. Synthesis, polymorphism, and insecticidal activity of methyl 4-(4-chlorophenyl)-8-iodo-2-methyl-6-oxo-1, 6-dihydro-4H-pyrimido [2, 1-b]quinazoline-3-carboxylate against *Anopheles arabiensis* mosquito. Chem Biol Drug Des. 2016; 88:88-96), anti-tubercular (Venugopala K. N., Nayak S. K., Pillay M., Prasanna R., Coovadia Y. M., Odhav B. Synthesis and antitubercular activity of 2-(substituted phenyl/benzyl-amino)-6-(4-chlorophenyl)-5-(methoxycarbonyl)-4-methyl-3, 6-dihydropyrimidin-1-ium chlorides. Chem Biol Drug Des. 2013; 81:219-227), thymidylate kinase inhibitors (Venugopala K. N., Tratrak C., Pillay M., Chandrashekhara-ppa S., Al-Attaqchi O. H. A., Aldhubiab B. E., et al. In silico design and synthesis of tetrahydropyrimidinones and tetrahydropyrimidinethiones as potential thymidylate kinase inhibitors exerting anti-TB activity against *Mycobacterium tuberculosis*. Drug Des Devel Ther. 2020; 14:1027), anti-mosquito (Venugopala K. N., Gleiser R. M., Chalannavar R. K., Odhav B. Antimosquito properties of 2-substituted phenyl/benzylamino-6-(4-chlorophenyl)-5-methoxycarbonyl-4-methyl-3, 6-dihydropyrimidin-1-ium chlorides against *Anopheles arabiensis*. Med Chem. 2014; 10:211-219), antidiabetic (Bairagi K. M., Younis N. S., Emeka P. M., Sangtani E., Gonnade R. G., Venugopala K. N., et al. Antidiabetic activity of dihydropyrimidine scaffolds and structural insight by single crystal X-ray studies. Med Chem. 2020; 16:996-1003, Bairagi K. M., Younis N. S., Emeka P. M., Venugopala K. N., Alwassil O. I., Khalil H. E., et al. Chemistry, anti-diabetic activity and structural analysis of substituted dihydropyrimidine analogues. J Mol Struct. 2021; 1227:129412), anthelmintic (Chitikina S. S., Buddiga P, Deb P. K., Mailavaram R. P., Venugopala K. N., Nair A. B., et al. Synthesis and anthelmintic activity of some novel

2

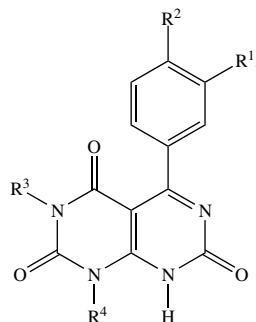

(E)-2-methyl/propyl-4-(2-(substitutedbenzylidene) hydrazinyl)-5, 6, 7, 8-tetrahydrobenzo [4, 5] thieno [2, 3-d] pyrimidines. Med Chem Res. 2020; 29:1600-1610), anticancer (Venugopala K. N., Govender R., Khedr M. A., Venugopala R., Aldhubiab B. E., Harsha S, et al. Design, synthesis, and computational studies on dihydropyrimidine scaffolds as potential lipoxigenase inhibitors and cancer chemopreventive agents. Drug Des Devel Ther. 2015; 9:911) and polymorphism property (Panini P, Venugopala K. N., Odhav B, Chopra D. Polymorphism in two biologically active dihydropyrimidinium hydrochloride derivatives: Quantitative inputs towards the energetics associated with crystal packing. Acta Crystal Section B. 2014; 70:681-696).

Thus, new antitumoral/anticancer compounds solving the aforementioned problems are desired.

SUMMARY

The present subject matter relates to the field of pharmaceuticals, particularly to novel 5-(3-substituted phenyl)-pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione analogues, a synthetic process for making the same, compositions comprising these compounds, and the use of the compounds as anticancer agents. In an effort to develop novel anticancer agents, a series of 5-(3-substituted phenyl)-pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione derivatives has been achieved by synthetic chemical methods and purified by the column chromatographic method. The compounds can be obtained in good yields. Structural elucidation of the compounds is completed by spectral techniques such as FT-IR, NMR (¹H and ¹³C), elemental analysis, and LC-MS. The present compounds can have anticancer activity, for example, against breast cancer, lung cancer, and other types of cancer. Some compounds exhibit promising anticancer activity between millimolar to micromolar concentrations compared to standard anticancer agents. Some of the selected lead compounds can be successfully taken forward to develop novel anticancer drug candidates.

In an embodiment, the present subject matter relates to compound having the formula 4:

or a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof, wherein:

R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

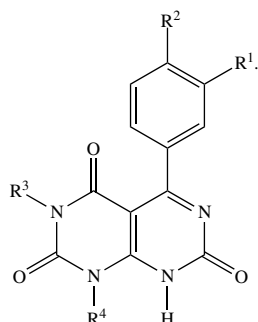

R₂ is selected from the group consisting of hydrogen, a C₁-C₆ straight or branched chain alkoxy, and benzyloxy;

R₃ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl; and

R₄ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl.

3

In another embodiment, the present subject matter relates to a compound having the formula 4:

or a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof, wherein:

R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

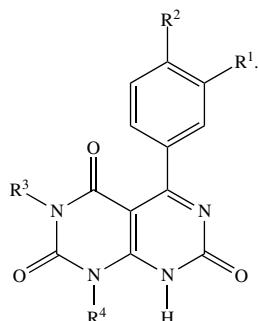

R₂ is selected from the group consisting of hydrogen, methoxy, and benzyloxy;

R₃ is selected from the group consisting of hydrogen and methyl; and

R₄ is selected from the group consisting of hydrogen and methyl.

In a further embodiment, the present subject matter relates to a compound selected from the group consisting of: 5-(3-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7 (1H,3H,8H)-trione (4a); 5-(4-(Benzyloxy)phenyl)pyrimido [4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4b); 5-(3-Hydroxy-4-methoxyphenyl)pyrimido[4,5-d]pyrimidine-2,4,7 (1H,3H,8H)-trione (4c); 5-(3-Hydroxy-4-methoxyphenyl)-1,3-dimethylpyrimido [4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4d); and a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof.

In an additional embodiment, the present subject matter relates to a method of preparing a compound having the formula 4:

the method comprising:

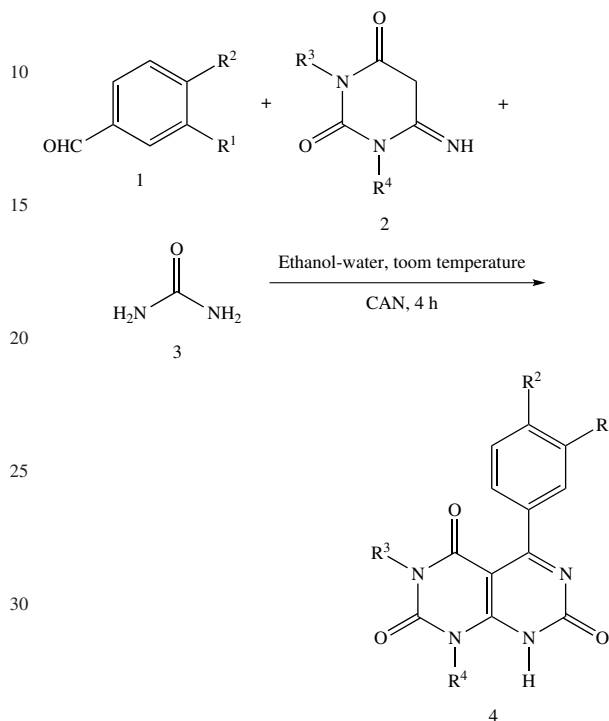

mixing equimolar amounts of a substituted aromatic aldehyde having the formula 1, a substituted barbituric acid derivative having the formula 2, and urea having the formula 3 to obtain a first mixture;

adding a mixture of water and ethanol along with a catalytic amount of Ceric Ammonium Nitrate to the first mixture to obtain a reaction mixture;

4

stirring the reaction mixture until reaction completion; and
filtering, drying, and recrystallizing the compound of formula 4 using ethanol, wherein the reaction occurs according to the following formula:

4 5

wherein:

R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

R₂ is selected from the group consisting of hydrogen, a C₁-C₆ straight or branched chain alkoxy, and benzyloxy;

R₃ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl; and

R₄ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl.

Further contemplated herein are pharmaceutical compositions containing these compounds, as well as methods of treating a microbial and/or bacterial infection by administering the present compounds to a patient in need thereof.

These and other features of the present subject matter will become readily apparent upon further review of the following specification.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

The following definitions are provided for the purpose of understanding the present subject matter and for construing the appended patent claims.

Definitions

Throughout the application, where compositions are described as having, including, or comprising specific components, or where processes are described as having, including, or comprising specific process steps, it is contemplated

5

that compositions of the present teachings can also consist essentially of, or consist of, the recited components, and that the processes of the present teachings can also consist essentially of, or consist of, the recited process steps.

It is noted that, as used in this specification and the appended claims, the singular forms “a”, “an”, and “the” include plural references unless the context clearly dictates otherwise.

In the application, where an element or component is said to be included in and/or selected from a list of recited elements or components, it should be understood that the element or component can be any one of the recited elements or components, or the element or component can be selected from a group consisting of two or more of the recited elements or components. Further, it should be understood that elements and/or features of a composition or a method described herein can be combined in a variety of ways without departing from the spirit and scope of the present teachings, whether explicit or implicit herein.

The use of the terms “include,” “includes,” “including,” “have,” “has,” or “having” should be generally understood as open-ended and non-limiting unless specifically stated otherwise.

The use of the singular herein includes the plural (and vice versa) unless specifically stated otherwise. In addition, where the use of the term “about” is before a quantitative value, the present teachings also include the specific quantitative value itself, unless specifically stated otherwise. As used herein, the term “about” refers to a $\pm 10\%$ variation from the nominal value unless otherwise indicated or inferred.

As used herein, “alkyl” refers to a straight-chain or branched saturated hydrocarbon group. Examples of alkyl groups include methyl (Me), ethyl (Et), propyl (e.g., n-propyl and z'-propyl), butyl (e.g., n-butyl, z'-butyl, sec-butyl, tert-butyl), pentyl groups (e.g., n-pentyl, z'-pentyl, -pentyl), hexyl groups, and the like. In various embodiments, an alkyl group can have 1 to 40 carbon atoms (i.e., C₁-C₄₀ alkyl group), for example, 1-30 carbon atoms (i.e., C₁-C₃₀ alkyl group). In some embodiments, an alkyl group can have 1 to 6 carbon atoms, and can be referred to as a “lower alkyl group” or a “C₁-C₆ alkyl group”. Examples of lower alkyl groups include methyl, ethyl, propyl (e.g., n-propyl and z'-propyl), and butyl groups (e.g., n-butyl, z'-butyl, sec-butyl, tert-butyl). In some embodiments, alkyl groups can be substituted as described herein. An alkyl group is generally not substituted with another alkyl group, an alkenyl group, or an alkynyl group.

The term “substituted alkyl” as used herein refers to an alkyl group in which 1 or more (up to about 5, for example about 3) hydrogen atoms is replaced by a substituent independently selected from the group: —O, —S, acyl, acyloxy, optionally substituted alkoxy, optionally substituted amino (wherein the amino group may be a cyclic amine), azido, carboxyl, (optionally substituted alkoxy)carbonyl, amido, cyano, optionally substituted cycloalkyl, optionally substituted cycloalkenyl, halogen, hydroxyl, nitro, sulfamoyl, sulfanyl, sulfinyl, sulfonyl, and sulfonic acid. Some of the optional substituents for alkyl are hydroxy, halogen exemplified by chloro and bromo, acyl exemplified by methylcarbonyl; alkoxy, and heterocyclyl exemplified by mor-

6

pholino and piperidino. Other alkyl substituents as described herein may further be contemplated.

The term “optional” or “optionally” means that the subsequently described event or circumstance may or may not occur, and that the description includes instances where said event or circumstance occurs and instances in which it does not. For example, “optionally substituted alkyl” means either “alkyl” or “substituted alkyl,” as defined herein.

It will be understood by those skilled in the art with respect to any chemical group containing one or more substituents that such groups are not intended to introduce any substitution or substitution patterns that are sterically impractical and/or physically non-feasible.

The term “isomers” or “stereoisomers” as used herein relates to compounds that have identical molecular formulae but that differ in the arrangement of their atoms in space. Stereoisomers that are not mirror images of one another are termed “diastereoisomers” and stereoisomers that are non-superimposable mirror images are termed “enantiomers,” or sometimes optical isomers. A carbon atom bonded to four non-identical substituents is termed a “chiral center.” Certain compounds herein have one or more chiral centers and therefore may exist as either individual stereoisomers or as a mixture of stereoisomers. Configurations of stereoisomers that owe their existence to hindered rotation about double bonds are differentiated by their prefixes cis and trans (or Z and E), which indicate that the groups are on the same side (cis or Z) or on opposite sides (trans or E) of the double bond in the molecule according to the Cahn-Ingold-Prelog rules. All possible stereoisomers are contemplated herein as individual stereoisomers or as a mixture of stereoisomers.

Unless defined otherwise, all technical and scientific terms used herein have the same meaning as commonly understood to one of ordinary skill in the art to which the presently described subject matter pertains.

Where a range of values is provided, for example, concentration ranges, percentage ranges, or ratio ranges, it is understood that each intervening value, to the tenth of the unit of the lower limit, unless the context clearly dictates otherwise, between the upper and lower limit of that range and any other stated or intervening value in that stated range, is encompassed within the described subject matter. The upper and lower limits of these smaller ranges may independently be included in the smaller ranges, and such embodiments are also encompassed within the described subject matter, subject to any specifically excluded limit in the stated range. Where the stated range includes one or both of the limits, ranges excluding either or both of those included limits are also included in the described subject matter.

Throughout the application, descriptions of various embodiments use “comprising” language. However, it will be understood by one of skill in the art, that in some specific instances, an embodiment can alternatively be described using the language “consisting essentially of” or “consisting of”.

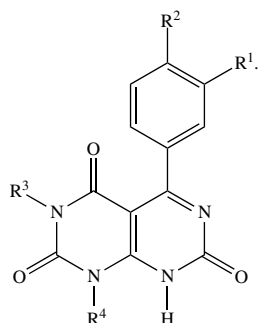

“Subject” as used herein refers to any animal classified as a mammal, including humans, domestic and farm animals, and zoo, sports, and pet companion animals such as household pets and other domesticated animals such as, but not limited to, cattle, sheep, ferrets, swine, horses, poultry, rabbits, goats, dogs, cats and the like.

“Patient” as used herein refers to a subject in need of treatment of a condition, disorder, or disease, such as an acute or chronic airway disorder or disease.

7

For purposes of better understanding the present teachings and in no way limiting the scope of the teachings, unless otherwise indicated, all numbers expressing quantities, percentages or proportions, and other numerical values used in the specification and claims, are to be understood as being modified in all instances by the term “about”. Accordingly, unless indicated to the contrary, the numerical parameters set forth in the following specification and attached claims are approximations that may vary depending upon the desired properties sought to be obtained. At the very least, each numerical parameter should at least be construed in light of the number of reported significant digits and by applying ordinary rounding techniques.

In an embodiment, the present subject matter relates to a compound having the formula 4:

or a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof, wherein:

R_1 is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

R_2 is selected from the group consisting of hydrogen, a C_1 - C_6 straight or branched chain alkoxy, and benzyloxy;

R_3 is selected from the group consisting of hydrogen and a C_1 - C_6 straight or branched chain alkyl; and

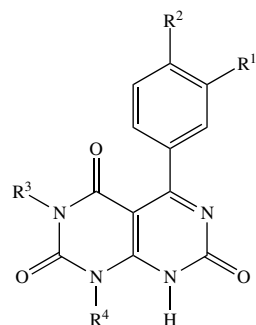

R_4 is selected from the group consisting of hydrogen and a C_1 - C_6 straight or branched chain alkyl.

In one embodiment, R_2 can be selected from the group consisting of hydrogen, methoxy, and benzyloxy. In a further embodiment, R_3 can be selected from the group consisting of hydrogen and methyl. In an additional embodiment, R_4 can be selected from the group consisting of hydrogen and methyl.

In certain embodiments, the compound can be selected from the group consisting of: 5-(3-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4a); 5-(4-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4b); 5-(3-Hydroxy-4-methoxyphenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4c); 5-(3-Hydroxy-4-methoxyphenyl)-1,3-dimethylpyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4d); and a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof.

8

In another embodiment, the present subject matter relates to a compound having the formula 4:

or a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof, wherein:

R_1 is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

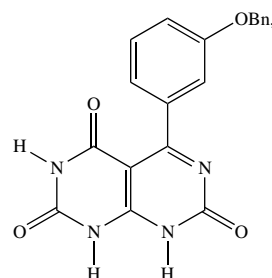

R_2 is selected from the group consisting of hydrogen, methoxy, and benzyloxy;

R_3 is selected from the group consisting of hydrogen and methyl; and

R_4 is selected from the group consisting of hydrogen and methyl.

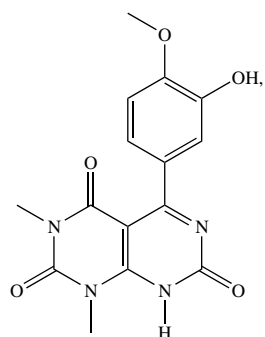

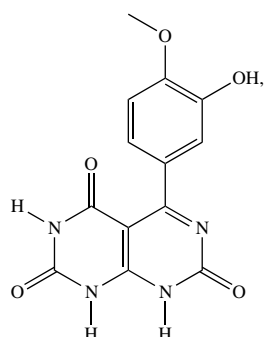

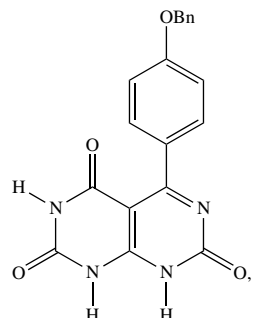

In a further embodiment, the present subject matter relates to a compound selected from the group consisting of: 5-(3-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4a); 5-(4-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4b); 5-(3-Hydroxy-4-methoxyphenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4c); 5-(3-Hydroxy-4-methoxyphenyl)-1,3-dimethylpyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4d); and a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof.

Said differently, the present subject matter can relate to compounds of formula 4, i.e., 5-(3-substituted phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione derivatives, selected from the group consisting of:

9

-continued

and a pharmaceutically acceptable salt, ester, stereoisomer, or solvate thereof.

It is to be understood that the present subject matter covers all combinations of substituent groups referred to herein.

The present compounds may contain, e.g., when isolated in crystalline form, varying amounts of solvents. Accordingly, the present subject matter includes all solvates of the present compounds of formula 4 and pharmaceutically acceptable stereoisomers, esters, and/or salts thereof. Hydrates are one example of such solvates.

Further, the present subject matter includes all mixtures of possible stereoisomers of the embodied compounds, independent of the ratio, including the racemates.

Salts of the present compounds, or salts of the stereoisomers thereof, include all inorganic and organic acid addition salts and salts with bases, especially all pharmaceutically acceptable inorganic and organic acid addition salts and salts with bases, particularly all pharmaceutically acceptable inorganic and organic acid addition salts and salts with bases customarily used in pharmacy.

Examples of acid addition salts include, but are not limited to, hydrochlorides, hydrobromides, phosphates, nitrates, sulfates, acetates, trifluoroacetates, citrates, D-glu-

10

- conates, benzoates, 2-(4-hydroxy-benzoyl)benzoates, butyrates, subsalicylates, maleates, laurates, malates, lactates, fumarates, succinates, oxalates, tartrates, stearates, benzenesulfonates (besilates), toluenesulfonates (tosilates), methanesulfonates (mesilates) and 3-hydroxy-2-naphthoates.

Examples of salts with bases include, but are not limited to, lithium, sodium, potassium, calcium, aluminum, magnesium, titanium, ammonium, meglumine and guanidinium salts. The salts include water-insoluble and, particularly, water-soluble salts.

- The present compounds, the salts, the stereoisomers and the salts of the stereoisomers thereof may contain, e.g., when isolated in crystalline form, varying amounts of solvents. Included within the present scope are, therefore, all solvates of the compounds of formula 4, as well as the solvates of the salts, the stereoisomers and the salts of the stereoisomers of the compounds of formula 4.

The present compounds may be isolated and purified in a manner known per se, e.g., by distilling off the solvent in vacuo and recrystallizing the residue obtained from a suitable solvent or subjecting it to one of the customary purification methods, such as column chromatography on a suitable support material.

- Salts of the compounds of formula 4 and the stereoisomers thereof can be obtained by dissolving the free compound in a suitable solvent (by way of non-limiting example, a ketone such as acetone, methylethylketone or methylisobutylketone; an ether such as diethyl ether, tetrahydrofuran or dioxane; a chlorinated hydrocarbon such as methylene chloride or chloroform; a low molecular weight aliphatic alcohol such as methanol, ethanol or isopropanol; a low molecular weight aliphatic ester such as ethyl acetate or isopropyl acetate; or water) which contains the desired acid or base, or to which the desired acid or base is then added. The acid or base can be employed in salt preparation, depending on whether a mono- or polybasic acid or base is concerned and depending on which salt is desired, in an equimolar quantitative ratio or one differing therefrom. The salts are obtained by filtering, reprecipitating, precipitating with a non-solvent for the salt or by evaporating the solvent. Salts obtained can be converted into the free compounds which, in turn, can be converted into salts. In this manner, pharmaceutically unacceptable salts, which can be obtained, for example, as process products in the manufacturing on an industrial scale, can be converted into pharmaceutically acceptable salts by processes known to the person skilled in the art.

- Pure diastereomers and pure enantiomers of the present compounds can be obtained, e.g., by asymmetric synthesis, by using chiral starting compounds in synthesis and by splitting up enantiomeric and diastereomeric mixtures obtained in synthesis. Preferably, the pure diastereomeric and pure enantiomeric compounds are obtained by using chiral starting compounds in synthesis.

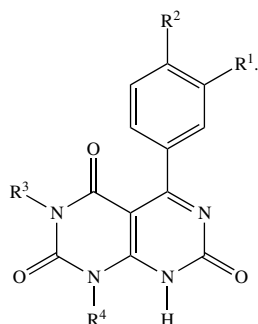

- Enantiomeric and diastereomeric mixtures can be split up into the pure enantiomers and pure diastereomers by methods known to a person skilled in the art. Preferably, diastereomeric mixtures are separated by crystallization, in particular fractional crystallization, or chromatography. Enantiomeric mixtures can be separated, e.g., by forming diastereomers with a chiral auxiliary agent, resolving the diastereomers obtained and removing the chiral auxiliary agent. As chiral auxiliary agents, for example, chiral acids can be used to separate enantiomeric bases and chiral bases can be used to separate enantiomeric acids via formation of diastereomeric salts. Furthermore, diastereomeric deriva-

11

tives such as diastereomeric esters can be formed from enantiomeric mixtures of alcohols or enantiomeric mixtures of acids, respectively, using chiral acids or chiral alcohols, respectively, as chiral auxiliary agents. Additionally, diastereomeric complexes or diastereomeric clathrates may be used for separating enantiomeric mixtures. Alternatively, enantiomeric mixtures can be split up using chiral separating columns in chromatography. Another suitable method for the isolation of enantiomers is enzymatic separation.

The present compounds can show promising anti-cancer activity between millimolar to micromolar concentrations compared to standard anti-cancer drugs. Some of the selected lead compounds can be successfully taken forward to develop novel anti-cancer drug candidates.

In one embodiment, the present subject matter relates to a method of preparing a compound having the formula 4:

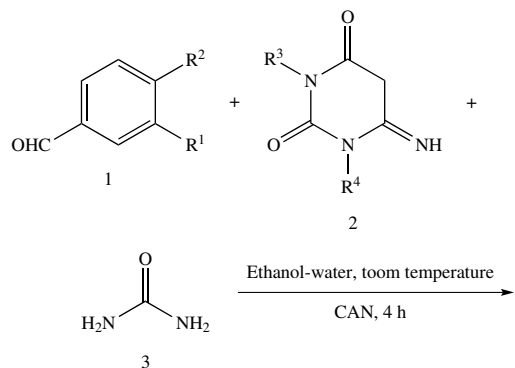

the method comprising:

mixing equimolar amounts of a substituted aromatic aldehyde having the formula 1, a substituted barbituric acid derivative having the formula 2, and urea having the formula 3 to obtain a first mixture;

adding a mixture of water and ethanol along with a catalytic amount of Ceric Ammonium Nitrate to the first mixture to obtain a reaction mixture;

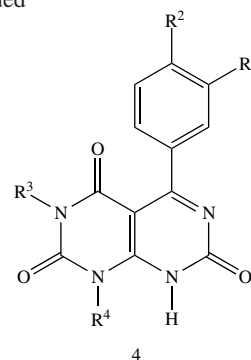

stirring the reaction mixture until reaction completion; and

filtering, drying, and recrystallizing the compound of formula 4 using ethanol, wherein the reaction occurs according to the following formula:

12

-continued

wherein:

R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

R₂ is selected from the group consisting of hydrogen, a C₁-C₆ straight or branched chain alkoxy, and benzyloxy;

R₃ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl; and

R₄ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl.

In this regard, the mixture of water and ethanol can have a ratio of 8:2, v/v. In another embodiment, the reaction mixture can be stirred at room temperature for at least about 4 hours. In a further embodiment, the present methods can obtain the compound of formula 4 at a yield of about 82% to about 86%.

In another embodiment, the present subject matter is directed to pharmaceutical compositions comprising a therapeutically effective amount of the compounds as described herein together with one or more pharmaceutically acceptable carriers, excipients, or vehicles. In some embodiments, the present compositions can be used for combination therapy, where other therapeutic and/or prophylactic ingredients can be included therein.

The present subject matter further relates to a pharmaceutical composition, which comprises at least one of the present compounds together with at least one pharmaceutically acceptable auxiliary.

In an embodiment, the pharmaceutical composition comprises one or two of the present compounds, or one of the present compounds.

Non-limiting examples of suitable excipients, carriers, or vehicles useful herein include liquids such as water, saline, glycerol, polyethyleneglycol, hyaluronic acid, ethanol, and the like. Suitable excipients for nonliquid formulations are also known to those of skill in the art. A thorough discussion of pharmaceutically acceptable excipients and salts useful herein is available in Remington's Pharmaceutical Sciences, 18th Edition. Easton, Pa., Mack Publishing Company, 1990, the entire contents of which are incorporated by reference herein.

The present compounds are typically administered at a therapeutically or pharmaceutically effective dosage, e.g., a dosage sufficient to provide treatment for cancer. Administration of the compounds or pharmaceutical compositions thereof can be by any method that delivers the compounds systemically and/or locally. These methods include oral routes, parenteral routes, intraduodenal routes, and the like.

While human dosage levels have yet to be optimized for the present compounds, generally, a daily dose is from about

0.01 to 10.0 mg/kg of body weight, for example about 0.1 to 5.0 mg/kg of body weight. The precise effective amount will vary from subject to subject and will depend upon the species, age, the subject's size and health, the nature and extent of the condition being treated, recommendations of the treating physician, and the therapeutics or combination of therapeutics selected for administration. The subject may be administered as many doses as is required to reduce and/or alleviate the signs, symptoms, or causes of the disease or disorder in question, or bring about any other desired alteration of a biological system.

In employing the present compounds for treatment of cancer, any pharmaceutically acceptable mode of administration can be used with other pharmaceutically acceptable excipients, including solid, semi-solid, liquid or aerosol dosage forms, such as, for example, tablets, capsules, powders, liquids, suspensions, suppositories, aerosols or the like. The present compounds can also be administered in sustained or controlled release dosage forms, including depot injections, osmotic pumps, pills, transdermal (including electrotransport) patches, and the like, for the prolonged administration of the compound at a predetermined rate, preferably in unit dosage forms suitable for single administration of precise dosages.

The present compounds may also be administered as compositions prepared as foods for humans or animals, including medical foods, functional food, special nutrition foods and dietary supplements. A "medical food" is a product prescribed by a physician that is intended for the specific dietary management of a disorder or health condition for which distinctive nutritional requirements exist and may include formulations fed through a feeding tube (referred to as enteral administration or gavage administration).

A "dietary supplement" shall mean a product that is intended to supplement the human diet and may be provided in the form of a pill, capsule, tablet, or like formulation. By way of non-limiting example, a dietary supplement may include one or more of the following dietary ingredients: vitamins, minerals, herbs, botanicals, amino acids, and dietary substances intended to supplement the diet by increasing total dietary intake, or a concentrate, metabolite, constituent, extract, or combinations of these ingredients, not intended as a conventional food or as the sole item of a meal or diet. Dietary supplements may also be incorporated into foodstuffs, such as functional foods designed to promote control of glucose levels. A "functional food" is an ordinary food that has one or more components or ingredients incorporated into it to give a specific medical or physiological benefit, other than a purely nutritional effect. "Special nutrition food" means ingredients designed for a particular diet related to conditions or to support treatment of nutritional deficiencies.

Generally, depending on the intended mode of administration, the pharmaceutically acceptable composition will contain about 0.1% to 90%, for example about 0.5% to 50%, by weight of a compound or salt of the present compounds, the remainder being suitable pharmaceutical excipients, carriers, etc.

One manner of administration for the conditions detailed above is oral, using a convenient daily dosage regimen which can be adjusted according to the degree of affliction. For such oral administration, a pharmaceutically acceptable, non-toxic composition is formed by the incorporation of any of the normally employed excipients, such as, for example, mannitol, lactose, starch, magnesium stearate, sodium saccharine, talcum, cellulose, sodium croscarmellose, glucose, gelatin, sucrose, magnesium carbonate, and the like. Such

compositions take the form of solutions, suspensions, tablets, dispersible tablets, pills, capsules, powders, sustained release formulations and the like.

The present compositions may take the form of a pill or tablet and thus the composition may contain, along with the active ingredient, a diluent such as lactose, sucrose, dicalcium phosphate, or the like; a lubricant such as magnesium stearate or the like; and a binder such as starch, gum acacia, polyvinylpyrrolidone, gelatin, cellulose and derivatives thereof, and the like.

Liquid pharmaceutically administrable compositions can, for example, be prepared by dissolving, dispersing, etc. an active compound as defined above and optional pharmaceutical adjuvants in a carrier, such as, for example, water, saline, aqueous dextrose, glycerol, glycols, ethanol, and the like, to thereby form a solution or suspension. If desired, the pharmaceutical composition to be administered may also contain minor amounts of nontoxic auxiliary substances such as wetting agents, emulsifying agents, or solubilizing agents, pH buffering agents and the like, for example, sodium acetate, sodium citrate, cyclodextrine derivatives, sorbitan monolaurate, triethanolamine acetate, triethanolamine oleate, etc.

For oral administration, a pharmaceutically acceptable non-toxic composition may be formed by the incorporation of any normally employed excipients, such as, for example, pharmaceutical grades of mannitol, lactose, starch, magnesium stearate, talcum, cellulose derivatives, sodium croscarmellose, glucose, sucrose, magnesium carbonate, sodium saccharin, talcum and the like. Such compositions take the form of solutions, suspensions, tablets, capsules, powders, sustained release formulations and the like.

For a solid dosage form, a solution or suspension in, for example, propylene carbonate, vegetable oils or triglycerides, may be encapsulated in a gelatin capsule. Such diester solutions, and the preparation and encapsulation thereof, are disclosed in U.S. Pat. Nos. 4,328,245; 4,409,239; and 4,410,545, the contents of each of which are incorporated herein by reference. For a liquid dosage form, the solution, e.g., in a polyethylene glycol, may be diluted with a sufficient quantity of a pharmaceutically acceptable liquid carrier, e.g., water, to be easily measured for administration.

Alternatively, liquid or semi-solid oral formulations may be prepared by dissolving or dispersing the active compound or salt in vegetable oils, glycols, triglycerides, propylene glycol esters (e.g., propylene carbonate) and the like, and encapsulating these solutions or suspensions in hard or soft gelatin capsule shells.

Other useful formulations include those set forth in U.S. Pat. Nos. Re. 28,819 and 4,358,603, the contents of each of which are hereby incorporated by reference.

Another manner of administration is parenteral administration, generally characterized by injection, either subcutaneously, intramuscularly or intravenously. Injectables can be prepared in conventional forms, either as liquid solutions or suspensions, solid forms suitable for solution or suspension in liquid prior to injection, or as emulsions. Suitable excipients are, for example, water, saline, dextrose, glycerol, ethanol or the like. In addition, if desired, the pharmaceutical compositions to be administered may also contain minor amounts of non-toxic auxiliary substances such as wetting or emulsifying agents, pH buffering agents, solubility enhancers, and the like, such as for example, sodium acetate, sorbitan monolaurate, triethanolamine oleate, cyclodextrins, etc.

Another approach for parenteral administration employs the implantation of a slow-release or sustained-release sys-

15

tem, such that a constant level of dosage is maintained. The percentage of active compound contained in such parenteral compositions is highly dependent on the specific nature thereof, as well as the activity of the compound and the needs of the subject. However, percentages of active ingredient of 0.01% to 10% in solution are employable and will be higher if the composition is a solid which will be subsequently diluted to the above percentages. The composition may comprise 0.2% to 2% of the active agent in solution.

Nasal solutions of the active compound alone or in combination with other pharmaceutically acceptable excipients can also be administered.

Formulations of the active compound or a salt may also be administered to the respiratory tract as an aerosol or solution for a nebulizer, or as a microfine powder for insufflation, alone or in combination with an inert carrier such as lactose. In such a case, the particles of the formulation have diameters of less than 50 microns, for example less than 10 microns.

The present compounds have valuable pharmaceutical properties, which make them commercially utilizable. Accordingly, the present subject matter further relates to use of the present compounds for the treatment of diseases such as cancer.

An embodiment of the present subject matter is directed to a method of treating cancer in a patient, comprising administering to a patient in need thereof a therapeutically effective amount of a compound as described herein. A therapeutically effective amount of the compound or pharmaceutically acceptable composition or an amount effective to treat a disease, such as cancer, may be determined initially from the Examples described herein and adjusted for specific targeted diseases using routine methods.

In an embodiment, the cancer can be selected from the group consisting of breast cancer and lung cancer.

The present subject matter further relates to a method of treating or preventing a disease comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds herein.

In particular, the present subject matter relates to a method of treating one of the above-mentioned diseases or disorders comprising administering to a patient in need thereof a therapeutically effective amount of at least one of the compounds herein.

In the above methods, the patient is preferably a mammal, more preferably a human. Furthermore, in the above methods, at least one of the present compounds can be used. In an embodiment, one or two of the present compounds are used, or one of the present compounds is used. Similarly, one or more of the present compounds can be used in combination therapy with one or more additional active agents.

The present subject matter can be better understood by referring to the following examples.

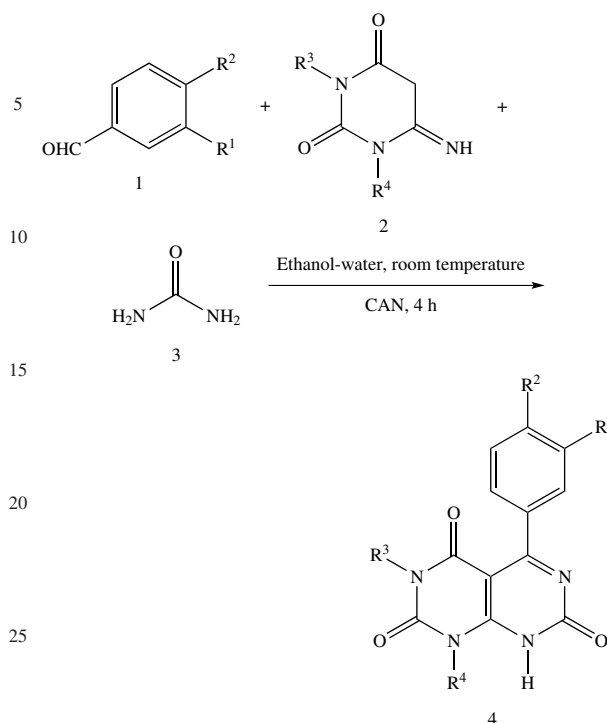

EXAMPLES

Example 1

Preparation of 5-(3-substituted phenyl)-pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione analogues (4a-d)

Compounds 4a-4d were synthesized according to the following Scheme 1.

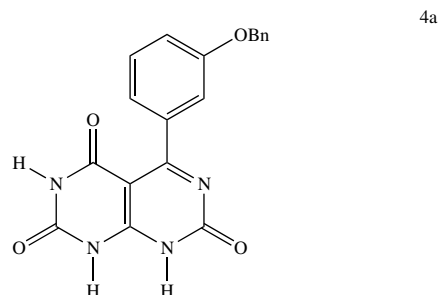

16

General Synthetic Procedure for the Synthesis of 5-(3-substituted phenyl)-pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-dione Analogues (4a-d)

Equimolar amounts of aromatic aldehydes (1a-d, 1 equiv.), barbituric acid derivatives (2a-d, 1 equiv.), and urea (3, 1 equiv.) were taken in a round-bottomed flask. The water:ethanol (8:2, v/v) mixture was added along with catalytic amount of ceric ammonium nitrate (CAN). The mixture was stirred at ambient temperature for 4 h. Completion of the reaction was monitored by TLC (ethylacetate: Hexane, 2:8) and the formed product was filtered and dried. The crude product was recrystallized using ethanol and the yield obtained was in the range of 82-86%.

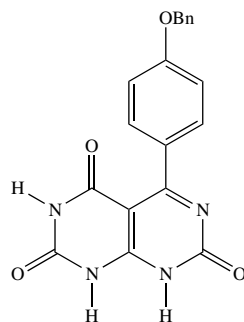

The characterization details of compounds 4a-4d are reported below.

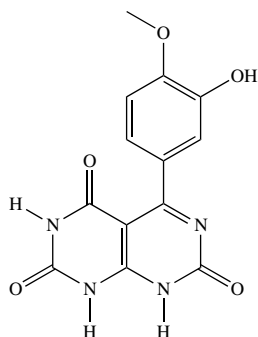

5-(3-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4a). Yellow solid; Yield: 82%; Melting point: 186-188° C.; FT-IR (KBr cm⁻¹): 3233 (—NH), 3101 (Ar—H), 2933 (C—H), 1691 (C=O), 1676 (C=N); ¹H NMR (DMSO-d₆, 400 MHz): δ=11.52 (s, 1H, —NH), 11.42

17

(s, 1H, —NH), 10.01 (s, 1H, —NH), 8.31 (s, 1H), 7.89 (s, 1H, Ar—H), 7.51-7.21 (m, 7H, Ar—H), 5.20 (s, 2H, —OCH₂); ¹³C NMR (DMSO-d₆, 100 MHz): δ=193.4, 163.9, 159.3, 158.2, 154.9, 150.8, 138.1, 137.2, 134.3, 130.9, 129.7, 129.0, 128.4, 128.3, 126.7, 123.2, 119.8, 114.4, 69.8; LCMS (m/z): 363.31 [M+H]⁺; Elemental analysis of C₁₉H₁₄N₄O₄, Calcd: C: 62.98; H: 3.89; N: 15.46. Found: C: 62.96; H: 3.85; N: 15.88.

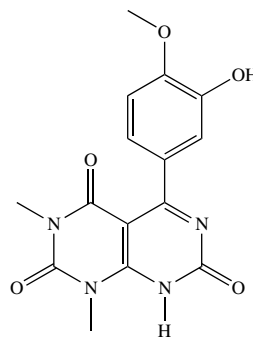

5-(4-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4b). Yellow solid; Yield: 76%; Melting point: 142-144° C.; FT-IR (KBr cm⁻¹): 3184 (—NH), 3065 (Ar—H), 2946 (C—H), 1702 (C=O), 1666 (C=N); ¹H NMR (DMSO-d₆, 400 MHz): δ 11.28 (s, 1H, —NH), 11.15 (s, 1H, —NH), 8.32 (d, 2H, J=8.8 Hz, Ar—H), 8.21 (s, 1H, —NH), 7.44-7.31 (m, 5H, Phenyl-H), 7.09 (d, 2H, J=8.4 Hz, Ar—H), 5.20 (s, 2H, —OCH₂); ¹³C NMR (DMSO-d₆, 100 MHz): δ=164.4, 163.0, 162.7, 155.4, 150.7, 138.0, 136.9, 129.1, 128.6, 128.5, 125.8, 116.2, 115.2, 70.2; LCMS (m/z): 361.95 [M]⁺; Elemental analysis of C₁₉H₁₄N₄O₄, Calcd: C: 62.98; H: 3.89; N: 15.46. Found: C: 62.96; H: 3.88; N: 15.47.

5-(3-Hydroxy-4-methoxyphenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4c) Yellow solid; Yield: 85%; Melting point: 272-274° C.; FT-IR (KBr cm⁻¹): 3533 (—OH), 3202 (—NH), 3096 (Ar—H), 1687 (C=O), 1583 (C=N); ¹H NMR (DMSO-d₆, 400 MHz): δ=11.24 (s, 1H, —NH), 11.12 (s, 1H, —NH), 9.42 (s, 1H, —OH), 8.11 (s, 1H, —NH), 8.08 (d, 1H, J=2.4 Hz, methoxyphenyl-H), 7.68 (dd, 1H, methoxyphenyl-H, J=8.8 and 2.4 Hz), 7.02 (d, 1H, methoxyphenyl-H, J=8.4 Hz), 3.84 (s, 3H, —OCH₃); ¹³C NMR (DMSO-d₆, 100 MHz): δ=164.6, 162.7, 156.1, 153.4,

18

150.8, 146.3, 130.9, 125.9, 120.9, 115.6, 111.8, 56.3; LCMS (m/z): 302.00 [M+]⁺; Elemental analysis of C₁₃H₁₀N₄O₅, Calcd: C: 51.66; H: 3.34; N: 18.54. Found: C: 51.64; H: 3.38; N: 18.57.

5-(3-Hydroxy-4-methoxyphenyl)-1,3-dimethylpyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4d). Yellow solid; Yield: 86%; Melting point: 198-200° C.; FT-IR (KBr cm⁻¹): 3512 (—OH), 3228 (—NH), 3116 (Ar—H), 1708 (C=O), 1595 (C=N); ¹H NMR (DMSO-d₆, 400 MHz): δ=9.42 (s, 1H, —OH), 8.17 (s, 1H, —NH), 8.06 (d, 1H, methoxyphenyl-H, J=2.0 Hz), 7.65 (dd, 1H, methoxyphenyl-H, J=8.8 and 2.4 Hz), 7.02 (d, 1H, methoxyphenyl-H, J=8.8 Hz), 3.84 (s, 3H, —OCH₃), 3.16 (s, 6H, —NCH₃); ¹³C NMR (DMSO-d₆, 100 MHz): δ=163.2, 161.3, 156.9, 153.5, 151.6, 146.3, 130.9, 125.9, 120.7, 115.3, 111.8, 56.3, 29.2, 28.5; LCMS (m/z): 331.18 [M+H]⁺; Elemental analysis of C₁₅H₁₄N₄O₅, Calcd: C: 54.55; H: 4.27; N: 16.96. Found: C: 54.54; H: 4.26; N: 16.97.

Example 2

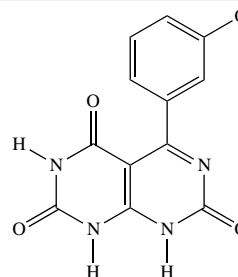

Anticancer Activity

The anticancer IC₅₀ values for the designed compounds 4a, 4b, 4c, and 4d were evaluated in μM against the human breast cancer cell line (MCF-7) and the adeno carcinomic human alveolar basal epithelial cell line (A-549), as summarized below in Table 1.

Table 1

Compound Code	Compound structure	MCF-7 (μM)	A-549 (μM)
---------------	--------------------	------------	------------

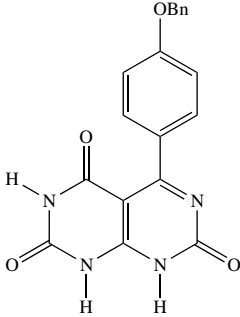

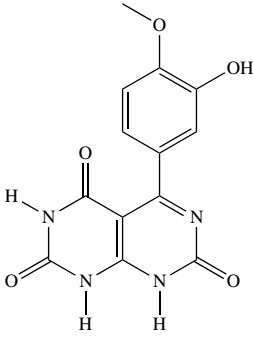

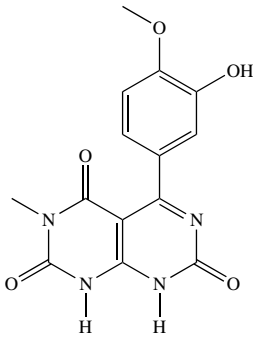

4a

4a

Table 1-continued

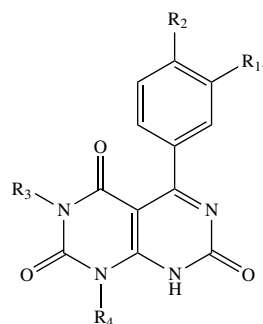

Compound Code	Compound structure	MCF-7 (μM)	A-549 (μM)
4b		0.038	0.082
4c		0.295	0.461
4d		0.010	0.186

It is to be understood that the present compounds, compositions, and methods are not limited to the specific embodiments described above, but encompasses any and all embodiments within the scope of the generic language of the following claims enabled by the embodiments described herein, or otherwise shown in the drawings or described above in terms sufficient to enable one of ordinary skill in the art to make and use the claimed subject matter.

20

We claim:

1. A compound having the formula 4:

or a pharmaceutically acceptable salt, stereoisomer, or solvate thereof, wherein:

R_1 is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

R_2 is selected from the group consisting of hydrogen, a C_1 - C_6 straight or branched chain alkoxy, and benzyloxy;

R_3 is selected from the group consisting of hydrogen and a C_1 - C_6 straight or branched chain alkyl; and

R_4 is selected from the group consisting of hydrogen and a C_1 - C_6 straight or branched chain alkyl.

2. The compound of claim 1, wherein R_2 is selected from the group consisting of hydrogen, methoxy, and benzyloxy.

3. The compound of claim 1, wherein R_3 is selected from the group consisting of hydrogen and methyl.

4. The compound of claim 1, wherein R_4 is selected from the group consisting of hydrogen and methyl.

5. The compound of claim 1, wherein the compound is selected from the group consisting of:

5-(3-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4a);

5-(4-(Benzyloxy)phenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4b);

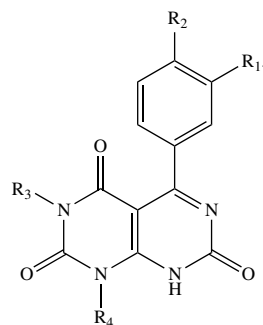

5-(3-Hydroxy-4-methoxyphenyl)pyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4c); and

5-(3-Hydroxy-4-methoxyphenyl)-1,3-dimethylpyrimido[4,5-d]pyrimidine-2,4,7(1H,3H,8H)-trione (4d);

or a pharmaceutically acceptable salt, stereoisomer, or solvate thereof.

6. A pharmaceutically acceptable composition comprising a therapeutically effective amount of the compound of claim 1 and a pharmaceutically acceptable carrier.

7. A compound having the formula 4:

21

or a pharmaceutically acceptable salt, stereoisomer, or solvate thereof, wherein:

R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

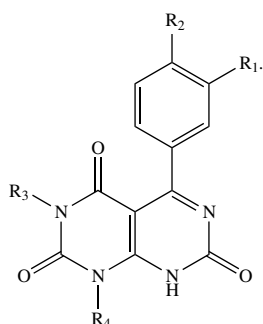

R₂ is selected from the group consisting of hydrogen, methoxy, and benzyloxy;

R₃ is selected from the group consisting of hydrogen and methyl; and

R₄ is selected from the group consisting of hydrogen and methyl.

8. A pharmaceutically acceptable composition comprising a therapeutically effective amount of the compound of claim 7 and a pharmaceutically acceptable carrier.

9. A method of preparing a compound having the formula 4:

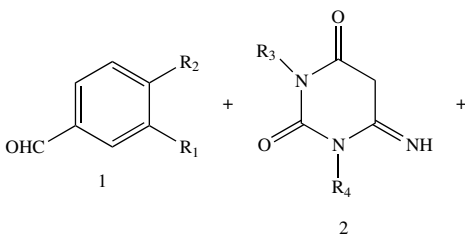

the method comprising:

mixing equimolar amounts of a substituted aromatic aldehyde having the formula 1, a substituted barbituric acid derivative having the formula 2, and urea having the formula 3 to obtain a first mixture;

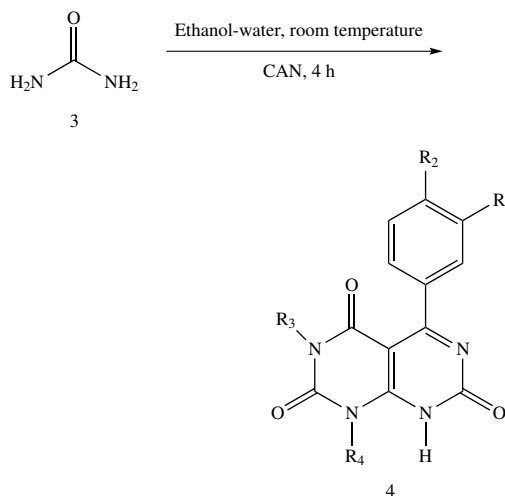

adding a mixture of water and ethanol along with a catalytic amount of Ceric Ammonium Nitrate to the first mixture to obtain a reaction mixture;

stirring the reaction mixture until reaction completion; and

filtering, drying, and recrystallizing the compound of formula 4 using ethanol, wherein the reaction occurs according to the following formula:

**22**

-continued

wherein:

R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

R₂ is selected from the group consisting of hydrogen, a C₁-C₆ straight or branched chain alkoxy, and benzyloxy;

R₃ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl; and

R₄ is selected from the group consisting of hydrogen and a C₁-C₆ straight or branched chain alkyl.

10. The method of claim 9, wherein the mixture of water and ethanol has a ratio of 8:2, v/v.

11. The method of claim 9, wherein the reaction mixture is stirred at room temperature for at least about 4 hours.

12. The method of claim 9, wherein:

R₁ is selected from the group consisting of hydrogen, hydroxy, and benzyloxy;

R₂ is selected from the group consisting of hydrogen, methoxy, and benzyloxy;

R₃ is selected from the group consisting of hydrogen and methyl; and

R₄ is selected from the group consisting of hydrogen and methyl.

13. The method of claim 9, wherein the method obtains the compound of formula 4 at a yield of about 82% to about 86%.
